CASE STUDY

Jemiclad Hygienic Wall Cladding, Silk Grey

Wellstar Kennestone Regional Medical Center

As part of a major renovation initiative, Wellstar Kennestone Regional Medical Center completed significant upgrades to two commercial kitchens, dry storage areas, and multiple support spaces throughout the facility. The project called for a wall system that could withstand the demands of a busy healthcare environment while maintaining the highest standards of cleanliness and durability.

With constant exposure to moisture, frequent cleaning, and heavy daily traffic, the hospital required a solution that was fully waterproof, hygienic, and easy to maintain without compromising long-term performance. The selected wall system was designed to support infection-control efforts, streamline maintenance, and provide a clean, seamless appearance capable of standing up to the rigorous conditions of a high-traffic medical setting (*Jemiclad America. Wellstar Kennestone Regional Medical Center, USA. 2026*).

PROJECT:

Wellstar Kennestone Regional Medical Center

PRODUCT DETAIL:

Jemiclad Hygienic Wall Cladding, Silk Grey

GENERAL CONTRACTOR:

JE Dunn Construction

DESIGNER:

CDH Partners

INSTALLER:

Covered+Clad

DISTRIBUTOR:

William M. Bird

PHOTO CREDIT:

JE Dunn Construction, in collaboration with CDH Partners, specified Jemiclad hygienic wall cladding panels in Silk Grey to meet both the technical requirements and design intent of the project.

Over 700 panels were installed throughout the commercial kitchen and support spaces, with installation completed by Covered + Clad and material support from William M. Bird using a trim-free installation method. This approach created a seamless, fully watertight surface with no exposed joints or grout lines, supporting the strict hygiene standards required in a healthcare food service environment (*Jemiclad America. Wellstar Kennestone Regional Medical Center, USA. 2026*).

The renovation has transformed the kitchen areas at Wellstar Kennestone Regional Medical Center into modern, durable, and highly functional workspaces. The Jemiclad system provides a smooth, non-porous surface that supports infection control, resists impact and moisture, and simplifies daily cleaning, delivering a low-maintenance solution designed for long-term performance.

The Silk Grey finish adds a clean, contemporary aesthetic that remains practical in high-traffic environments, helping maintain a bright, professional look while concealing everyday wear.

COLLECTION:
Jemiclad Wall Cladding

COLOR:
Silk Grey

SKU:
JEMS0910

SIZE:
4'x10'

THICKNESS:
2.5mm

INSTALL TYPE:
Adhesive, Heat Weld

FINISH:
Gloss/Satin

WARRANTY:
20 year Commercial
