APPLICATION VERSATILITY	<ul style="list-style-type: none"> Recommended for Retail, Healthcare, Assisted Living, Hospitality, Multi-Family, Corporate, Educational and Residential environments Resists water, spills, and moisture Suitable for baths, laundry rooms, kitchens, and below-grade (basement) applications

CARBON NEUTRAL DÉJÀ NEW

“We are dedicated to protecting and enhancing our planet and our place in it through sustainability, transparency, innovation and industry leadership and with a company-wide commitment to fight social injustice wherever we encounter it.”
-Metroflor Brand Spirit

Metroflor is committed to reducing its impact. We are collaborating with our factories and suppliers in an effort to find innovative solutions to lower our carbon footprint of our products.

In order to have an immediate impact, the carbon footprint of Déjà New, our benchmark commercially rated glue-down LVT, has been offset through the purchase of Verified Emission Reductions (VER's) making it our first carbon neutral product. Metroflor's VER's will support the Southern Cardamom REDD+* project to protect the Cambodian forest from further deforestation.

The Southern Cardamom is one of the last unfragmented rainforests remaining in Southeast Asia. It's a biodiversity hotspot under relentless threat from illegal logging and poaching. The Southern Cardamom Rainforest serves as the region's most important watershed, climate regulator and carbon sink**.

Currently 497,000 hectares of the Southern Cardamom rainforest is protected through REDD+.

The VER's offsetting Déjà New's carbon footprint will help fund a range of REDD+ activities in the Southern Cardamom such as:

- Establishing robust ranger programs to protect the area against illegal logging and poaching
- Providing incentives to conserve forests instead of selling the land to loggers and developers
- Providing new economic opportunities to forest communities that are not reliant on forest products

Scan for more information.

*REDD+ is a framework of the United Nations that stands for **R**educing **E**missions from **D**eforestation and forest **D**egradation.

**A carbon sink absorbs carbon dioxide and converts it to oxygen released into the atmosphere.
